IT NEWS BRIEF

Secure Networkers

SEPTEMBER 2019

WHAT SHOULD YOU INCLUDE IN A NETWORK HEALTH CHECK?

Nothing is more fundamental to maintainin the health and performance of a network than establishing the routine of an annual network heath check.

A comprehensive network health check will include five functions:

1. It will update the OS to make it current with vulnerability patches.
2. It will perform a deep virus/malware scan.
3. It will update the antivirus software.
4. It will inspect elements of the network ("eyeballs on hardware").
5. It will check for outdated hardware. This is the time to replace old parts before they begin to fail.

Investing in an annual network health check is a great way to avoid many common network productivity problems and network breaches, and therefore it is one of the most cost-efficient investments one can do for the network. **MORE INFORMATION**

TECHNOLOGY HIGHLIGHT

PROTECT YOUR ENDPOINTS & EMAIL WITH EXCEPTIONAL NETWORK VISIBILITY

Block malware at the point of entry, get deep visibility into network-level threat activity, gain visibility into file activity, and be able to remove malware from PC, Linux, Mac, and mobile devices. AMP protections can also extend to cloud email and web security.

AMP is a subscription-based/web-based management console solution powered by Talos global threat intelligence. To protect your network, you could do no better. **REQUEST FREE TRIAL**

GET TO KNOW

Chau is expert at diagnosing and troubleshooting issues to prevent network breaches, malware attacks and data loss. He strongly advocates for effective firewall protection and putting prevention procedures in place. But it takes more than expertise to secure a customer's network: it takes trust.

"I think once we are out there and engaging with customers, we are actually creating a bond and trust between our company and our customers. I feel more confident and learn more of the customer's style and personality. This helps me handle their issues faster and more effectively."

The best security advice Chau can offer is for customers to become security-aware. "Question even the familiar emails," he advises, plus be alert to the behavior of your OS. "Do you notice that it keeps asking you, 'Do you want to do this? Yes, or No?' This question is a good practice for awareness."

CONFIDENCE IN NETWORK MAINTENANCE

Network administrators must possess the tools necessary to help them keep all systems running smoothly.

The Whole Security Package

- **AMP (ADVANCED MALWARE PROTECTION)**
- **UMBRELLA**
- **RMM (REMOTE MONITORING AND MANAGEMENT)**

With these three solutions in place, the Network Admin will be able to see what is running, what is full, and what network devices are in need of attention.
